

THE OFFICE OF THE CFO

CFO org transformation with Claude

How finance teams get leverage, precision and speed from Claude, and how Anthropic's own CFO org does it.

Four problems every finance team faces at scale

1

Speed to insight

Leadership needs answers now, not next sprint.

2

Lean teams

Complexity keeps growing.
The team stays the same size.

3

Process bottlenecks

Manual workflows that don't scale with volume.

4

Precision at scale

Language models are powerful, but finance demands exactness.

Three building blocks

01 Connectors

Live, authenticated access to the tools your team already uses.

Gmail

Drive

Calendar

Microsoft 365

Salesforce

Slack

Notion

Jira

02 Skills

Instructions Claude reads when the task fits, written like docs by the people who do the work.

Month-end close

Board reporting pack

Budget vs. actuals

Vendor spend review

03 Plugins

Connectors, skills and policy in one bundle. One install for the user, one governance surface for IT.

Query the ledger · read

Draft a journal entry · action

Run a variance report · read

Connected to our systems, taught our workflows

CONNECTORS

Claude reads where finance works

Data warehouse · BigQuery

ERP · Workday Financials

Messaging · Slack

Documents · Google Workspace

Project tracking · Asana

SKILLS

Claude follows our procedures

Foundational · which tables to query, what columns mean, how the GL is structured

Workflow · step-by-step procedures for recurring tasks

Authors · accountants and FP&A analysts, not IT

~150 shared skills, written by finance, not engineering

One version-controlled library, distributed as plugins. Skills show up in Cowork with no per-user setup, so a new joiner has the full library on day one.

"Your best preparer writes the procedure down once in plain language and it runs the same way for everyone, every time."

Tim Ross, Finance AI Product Lead, Anthropic

What each team is building

TEAM	WHAT THEY BUILD	WHAT IT CHANGES
Finance and strategy	Forecasting and cohort dashboards, built by analysts from a prompt	Changes land in hours, not months. A daily revenue digest reaches leadership at 7 am.
Accounting	Bank and GL reconciliations, flux on all three statements, ASC 606 contract extraction	Breaks classified and reviewer commentary drafted as a first pass
Corporate development and IR	Intake skills that read internal data and market sources to assess a potential target	Three to four screening reports a day, rolled into memos in minutes
Tax and treasury	Transfer pricing, R&D credit and nexus research. Indirect-tax and cash reconciliations.	Answers cite primary sources. Reconciliations reuse accounting's skill pattern.

Where the hours come from

WORKFLOW	CADENCE	WHERE	WHAT CLAUDE DOES
Board deck	Quarterly	Claude Cowork	Reconciles every number to one source of truth and checks the narrative
Monthly financial review	Monthly	Claude Cowork	Drafts first-pass variance commentary in the established voice
Financial model work	As needed	Claude for Excel	Traces references across tabs and finds why a balance sheet won't balance
Cross-team context	Continuous	Google Workspace and Slack connectors	Pulls decisions and reasoning out of docs, email and long threads

A reconciliation, written once as a skill

FROM A LIVE DEMO ON SAMPLE DATA

The skill found two items in the GL but not in billing, three in billing but not in the GL, and one amount mismatch.

Revenue analysis on demand and on a schedule

ON DEMAND

The revenue movers skill

Queries the monthly revenue table in the warehouse
Breaks down the month-over-month change by source and sales segment
Surfaces the largest customer movements
Turns the bridge into a slide deck with one follow-up prompt

ON A SCHEDULE

The daily digest

Revenue and metrics land in leadership's Slack at 7 am
Weekly reports and recurring reviews run the same way
Read-only: it queries the warehouse and books nothing

"It sets and forgets and runs every day for you." Tim Ross, Finance AI Product Lead

Finance systems work, rebuilt with Claude

ERP MIGRATION VALIDATION

~20 seconds

to validate a year of historical data, compared with hundreds of hours by hand

The team used Claude to build a validation app for our ERP migration. Data is uploaded manually or batched on a schedule.

MASTER DATA GOVERNANCE

Tickets to chat

Change requests for cost centers and account names, captured complete the first time

Claude walks the requester through the required fields, routes the change for approval and keeps the audit trail.

Human in the loop at every step

STEP 1 · JOURNAL ENTRY PREP

- Claude finds the debits sitting in cash and the unmatched credits in AP or elsewhere on the balance sheet.
- A skill applies the mapping rules to propose the offsetting GL account.
- A person tags what Claude couldn't map, then approves the entry before anything posts.

STEP 2 · BANK RECONCILIATION

- Claude extracts the data from 45 PDF bank statements.
- It reconciles them against what sits in the ERP.
- It flags reconciling items and suggested next steps, for a reviewer to decide.

Flux and tie-out follow the same review-then-approve pattern down the close pathway.

The controls that stay human

"You need to verify everything that comes out and take ownership of what comes out of it."

Anthropic finance team

Human sign-off before the ledger

Claude drafts the first pass. A person reviews and owns the output.

Read-only first

Reporting workflows read from the warehouse and book nothing.

Warehouse for scale, ERP for lookups

Large analysis goes through the data warehouse. Direct ERP connections suit targeted lookups.

Evidence on every run

What Claude read, what it proposed and who approved. Full auditability is still being built out.

Advice from inside the CFO org

1

Start simple

Ask Claude to read a document and summarize it, then keep pushing the boundary.

2

Pick recurring workflows

Board cycles and monthly reviews, where consistency compounds. Keep one project per audience.

3

Write it down once

Have your best preparer capture the procedure as a skill, so it runs the same way for everyone.

4

Keep the stack small

Cowork projects, Claude for Excel and a workspace connector cover most of it.
